

Read Me

Running the project(Linux)

Download Miniconda3 from <https://docs.conda.io/en/latest/miniconda.html> and create a virtual environment using the command:

```
conda create --n environmentName python=3.5
```

Where environmentName is replaced with the name for your environment.

Then start the environment by calling:

```
Source activate environmentName
```

Then install django by calling:

```
Pip install django
```

Locate the folder for with the project in it by entering the directory of the project in a terminal.

Run it by calling:

```
Python manage.py runserver
```

A link will appear which can be copied and pasted into the URL of a web browser.

The search page of the site should appear.

Some task that you can do on the site

On the search page you can search for “ski” to see a list of reviews that talk about skiing in various countries.

Feel free to test the site any way you want.
